SAECOIN — DOCUMENTATION INDEX

Document: Documentation_Index.md
Project: SAECOIN
Ticker: SAC (Provisional)
Version: 1.0
Status: Documentation
Purpose: Central index of all SAECOIN project documentation.

---

1. PROJECT OVERVIEW

SAECOIN is a proposed independent Proof of Work blockchain using the UTXO transaction model.

The project documentation defines:

- Product requirements.
- Blockchain architecture.
- Consensus rules.
- Technical implementation requirements.
- Wallet architecture.
- Mining architecture.
- Network operations.
- Security requirements.
- Testing and release procedures.

Important: SAECOIN is currently in the documentation and planning stage. The presence of a specification does not mean the corresponding software has been implemented or independently verified.

---

2. COMPLETE DOCUMENT LIST

The following documents form the current project documentation set.

No.| Filename| Purpose
1| PRD.md| Product Requirements Document
2| AppFlow.md| Application navigation and user flow
3| UI_Spec.md| User interface specifications
4| TRD.md| Technical Requirements Document
5| Schema.md| Data structures and schema
6| Blockchain_Architecture.md| Overall blockchain architecture
7| Consensus_Spec.md| Proof of Work and consensus specification
8| Security_Spec.md| Security requirements
9| API_Spec.md| API definitions

10| Testing_Strategy.md| Testing strategy
11| Development_Roadmap.md| Development phases and milestones
12| GitHub_Repository_Structure.md| Proposed repository structure
13| Coding_Standards.md| Coding and development standards
14| Build_and_Release.md| Build and release procedures
15| Development_Setup.md| Development environment setup
16| Network_Parameters.md| Network configuration parameters
17| Genesis_Block_Spec.md| Genesis block specification
18| Wallet_Security_Design.md| Wallet key security and recovery
19| Node_Operations.md| Full node operation guide
20| Mining_Guide.md| Mining architecture and usage guide
21| Mainnet_Launch_Checklist.md| Mainnet readiness checklist
22| Open_Decisions.md| Unresolved technical decisions
23| Glossary.md| Technical terminology

Total Documents: 23

---

3. DOCUMENT CATEGORIES

3.1 Product and Application

- PRD.md
- AppFlow.md
- UI_Spec.md

These documents describe the product, its applications and user experience.

3.2 Technical Architecture

- TRD.md
- Schema.md
- Blockchain_Architecture.md
- GitHub_Repository_Structure.md

These documents describe the proposed technical structure and components.

3.3 Blockchain Protocol

- Consensus_Spec.md
- Network_Parameters.md
- Genesis_Block_Spec.md

These documents define the blockchain protocol and network behavior.

Consensus-critical decisions must be reviewed and finalized before production implementation.

3.4 Security and Wallet

- Security_Spec.md
- Wallet_Security_Design.md

These documents describe security requirements and wallet protection.

3.5 Development and Operations

- Coding_Standards.md
- Development_Setup.md
- Development_Roadmap.md
- Build_and_Release.md
- Node_Operations.md
- Mining_Guide.md

These documents guide software development, building, mining and node operation.

3.6 Testing and Launch

- Testing_Strategy.md
- Mainnet_Launch_Checklist.md

These documents define verification and launch-readiness requirements.

3.7 Project Decisions and Reference

- Open_Decisions.md
- Glossary.md

These documents track unresolved decisions and standardize terminology.

---

4. RECOMMENDED DOCUMENT READING ORDER

A developer or AI coding agent should review the documents in the following order.

Stage 1 — Understand the Project

1. PRD.md
2. Development_Roadmap.md
3. Glossary.md

Stage 2 — Understand the Architecture

4. TRD.md

5. Blockchain_Architecture.md
6. GitHub_Repository_Structure.md
7. Schema.md

Stage 3 — Understand the Protocol

8. Consensus_Spec.md
9. Network_Parameters.md
10. Genesis_Block_Spec.md
11. Open_Decisions.md

Stage 4 — Understand Security

12. Security_Spec.md
13. Wallet_Security_Design.md

Stage 5 — Understand Applications

14. AppFlow.md
15. UI_Spec.md
16. API_Spec.md

Stage 6 — Understand Development

17. Development_Setup.md
18. Coding_Standards.md
19. Testing_Strategy.md
20. Build_and_Release.md

Stage 7 — Understand Operations

21. Node_Operations.md
22. Mining_Guide.md
23. Mainnet_Launch_Checklist.md

---

5. DOCUMENT AUTHORITY AND CONFLICT RESOLUTION

If two documents contain conflicting information, developers must not choose an arbitrary value.

Use the following rules:

1. Approved consensus decisions must be reflected in Consensus_Spec.md and the relevant protocol documents.
2. Open_Decisions.md tracks unresolved questions; it does not override approved specifications.

3. Network_Parameters.md must match the finalized network configuration.
4. Genesis_Block_Spec.md must match the finalized genesis configuration.
5. TRD.md defines technical implementation constraints.
6. Security_Spec.md defines mandatory security requirements.
7. Testing_Strategy.md defines required verification activities.
8. Mainnet_Launch_Checklist.md defines launch readiness requirements.

Any conflict involving monetary issuance, transaction validation, proof of work, difficulty adjustment or chain selection must block implementation of the affected consensus-critical component until resolved.

---

6. DOCUMENT VERSION CONTROL

Recommended document naming and versioning:

- Version 1.0 — Initial specification.
- Version 1.1 — Minor clarification or non-breaking update.
- Version 2.0 — Major structural or specification revision.

Every document update should include:

- Updated version.
- Updated date.
- Summary of changes.
- Reason for the change.
- Related documents requiring updates.

Consensus-critical changes must receive explicit technical review.

---

7. PROJECT IMPLEMENTATION STATUS

Component| Current Status
Product Planning| Documented
UI Planning| Documented
Blockchain Architecture| Proposed
Consensus Design| Pending Final Decisions
Monetary Policy| Proposed, Requires Verification
Genesis Configuration| Pending Finalization
Security Design| Documented, Requires Review
Wallet Design| Proposed
Node Implementation| Not Started
Mining Implementation| Not Started
Explorer Implementation| Not Started
Public Testnet| Not Started

Mainnet| Not Started

These statuses must be updated as real development work is completed and verified.

---

8. DOCUMENT STORAGE STRUCTURE

Recommended documentation directory:

```
SAECOIN/
│
├── docs/
│   │

│   │
│   ├── reference/
│   │   └── Glossary.md
│   │
│   └── Documentation_Index.md
│
└── README.md
```

This is a recommended organization. Existing files should be moved only after checking their actual locations and repository structure.

---

9. FUTURE DOCUMENTS

The following documents may be added as the project develops:

Filename| Purpose| Priority
Protocol_Review_Plan.md| Independent protocol review process| Critical
Threat_Model.md| Detailed threat analysis| High
Testnet_Operations.md| Public testnet operation| High
Mining_Benchmark_Plan.md| CPU/GPU mining benchmarks| Medium
Wallet_Recovery_Test_Plan.md| Wallet recovery verification| High
Incident_Response_Plan.md| Security incident response| High
Contribution_Guide.md| Open-source contribution process| Medium
Release_Notes.md| Software release history| Medium
Whitepaper.md| Public-facing technical overview| High

---

10. FINAL DOCUMENTATION RULE

Before implementation begins:

- Verify that all listed files exist.
- Check that their contents are complete.
- Resolve contradictory specifications.
- Identify all unresolved consensus-critical decisions.
- Record approved decisions.
- Update this index when documents are added or renamed.

This index is the central navigation reference for SAECOIN project documentation.
